

```
the /CS signal from
Pin12 of U3
gets trigger from HIGH to Low
by POKE 55040
```

NOTE:
 Afterwards I noticed that the solder bridges didn't work. You have to connect the solder bridges in such a way that the /CS signal is passed through all four inverters. I apologize.

the ADDRESS switching section:
if the CLK inputs changes from LOW to HIGH. the value of D0-D4 is wrtitten to A15-A19.
this addresses the bigger ROMs.

The diagram shows a 1MB-ROM board with the following connections:

- JP1 (Left Header):** Pins 1-14 are connected to pins 1-14 of the SK2 connector. Pin 14 is also connected to GND.
- SK2 (Central Connector):** Pins 1-16 are connected to pins 1-16 of the JP1 header. Pins 17-32 are connected to pins 17-32 of the JP2 header. Pin 32 is connected to VCC.
- JP2 (Right Header):** Pins 1-14 are connected to pins 1-14 of the SK2 connector. Pin 1 is connected to VCC.
- Components:**
 - A16, A19, A15, A18, A17:** Address lines connected to SK2 pins 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16.
 - D0, D1, D2:** Data lines connected to SK2 pins 13, 14, 15, 16.
 - D3, D4:** Data lines connected to SK2 pins 17, 18, 19, 20.
